PREDATOR INTEGRATED AMPLIFIER

Designed to meet the need for a high power integrated hybrid amplifier, the Predator provides state of the art signal processing using classic cathode follower and plate-loaded techniques with absolute minimal local feedback. Ultra high-speed rectifiers are used in a dual mono layout, sharing only the transformer. Plate-loading the driver stages offers high levels of transparency and detail.

A high quality remote control unit is available as an extra option, well complementing the amplifier. Together the amplifier and remote control unit form an unbeatable combination.

To ensure a clean supply of power from any standard outlet, a high quality power cable is also available, at extra cost.

Technical specifications

Non-inverting
200 Watts per channel @ 80hm
Power supply: 625VA
Toroidal transformer
Tube complement: 4 x 6922
4 pairs of complementary mosfets
Volume pot: Alps Blue Velvet

Faceplate: 8mm Weight: 12kg
